maMoS

madur gas monitoring system

CHARACTERISTIC | FEATURES | TECHNICAL DATA | SENSORS | EQUIPMENT | APPEARANCE

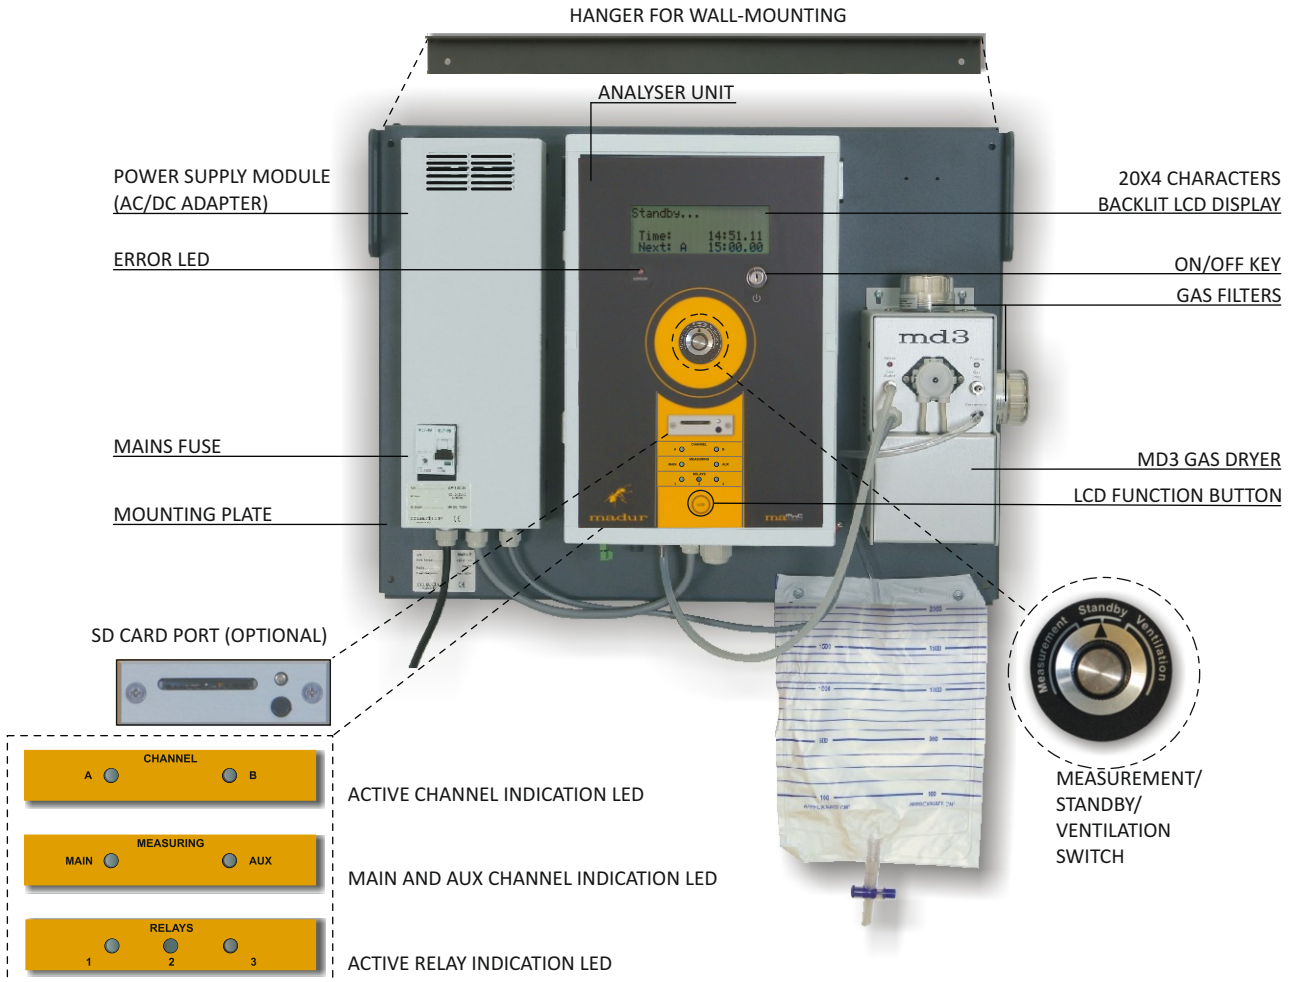
Small in size, yet very skillful analyser – it has the best capabilities/price ratio. maMoS is our alternative for large, intricate CEMS systems, as it does not fall behind them concerning functionality and abilities, and is far ahead in terms of expenses.

It has modular construction, and many add-ons, that makes it easily adjustable to a very specific, individual application.

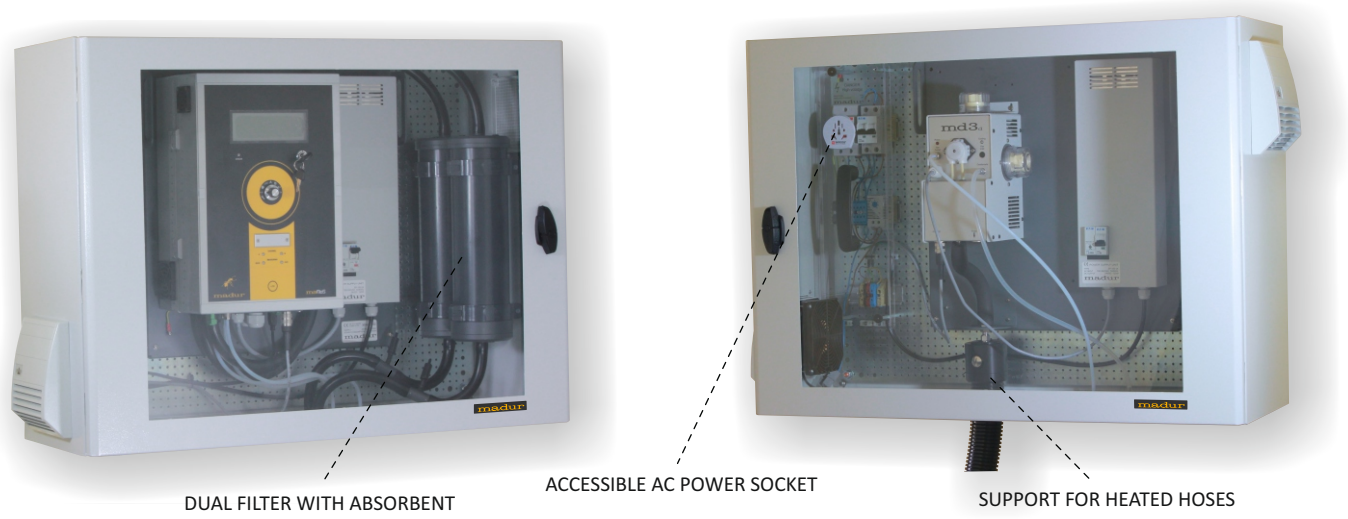
Powerful PC software allows to adopt many aspects of the analyser's work very individually (work schedule, analogue outputs' behaviour, data presentations, and more...).

Manufactured according to the principles of ISO 10396.

- Standard configuration consists of up to 6 sensors (NDIR and electrochemical)
- Up to 8 sensors in an extreme, unique configuration
- **NEW** Large display with backlight, 4 lines x 20 characters
- Different types of gas dryers to fit the customers needs
- Compact, Split and Twin split configurations
- Data-logger with SD card for results collection
- Analogue outputs (both current and voltage) to control external devices
- Digital and analogue inputs to pass signals from external devices, to trigger maMoS actions
- Communication with PC via different interfaces (USB, LAN, RS485 and **MODBUS**).
- Different work modes to select from (continuous measurements, work with scheduler, measurements triggered with digital input, “work in-turns” - allows to measure from two different sources, and more...)
- Powerful PC program to adjust the analyser's settings and to view the results
- Rich offer of add-ons and accessories
- **NEW** Possibility to work with heated hoses. Standard lengths: 3m 5m, 8m for 115VAC and 230VAC supply.
- **NEW** Possibility to work with programmable logic controllers (i.e. Siemens S7-1200) via modbus RTU.



maMoS IP55 **NEW**



- IP55 cabinet for maMoS and MD3 provides better protection in harsh enviroment.
- Available with the same sensor and equipment configuration as regular maMoS.
- Build-in ventilation system (option).
- Cabinet available also with climate control module or without ventialtion (both IP65 rated).
- Single or dual filtration system for protection from toxic gasses. Filter can be used with various absorbent (e.g. from Purafil).
- Cabinet features high quality steel construction with glazed door.

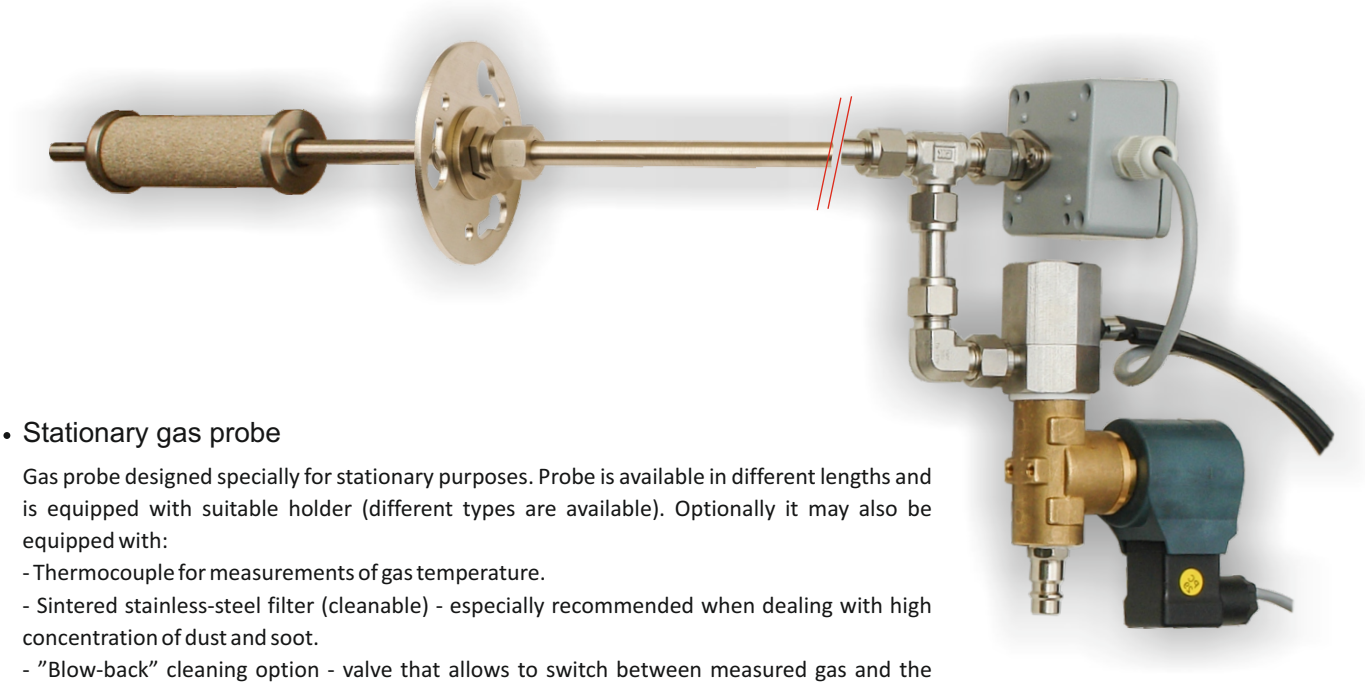
OPTIONAL EQUIPMENT & SPARE PARTS



- **Stationary gas probe**

  Gas probe designed specially for stationary purposes. Probe is available in different lengths and is equipped with suitable holder (different types are available). Optionally it may also be equipped with:
  - Thermocouple for measurements of gas temperature.
  - Sintered stainless-steel filter (cleanable) - especially recommended when dealing with high concentration of dust and soot.
  - ”Blow-back” cleaning option - valve that allows to switch between measured gas and the compressed air inlet that is used for cleaning the sintered filter.

- **Pitot tube**

  Pitot tube is used for indirect measurement of gas flow velocity (measurement with the analayser’s differential pressure sensor). A few lengths of tubes are available. Pitot tube has 2m gas tubings to connect it with the analyser. It may be provided with a suitable holder for stationary purposes

  ordering codes:
  pitot tube 800mm - Z00-PITOT-8002
  pitot tube 500mm - Z00-PITOT-5002

- **Heated filter**

  Heated filter is installed right after the gas probe. It is best when it is paired with heated hose to prevent vapour from condensing.

- **Ethernet / WiFi communication interfaces**

  Optional interface allows to communicate with maMoS analyser within LAN network either via cable or wirelessly with help of special WiFi adapter.
